

# Branding

# General Overview

Peaceful, Wellness

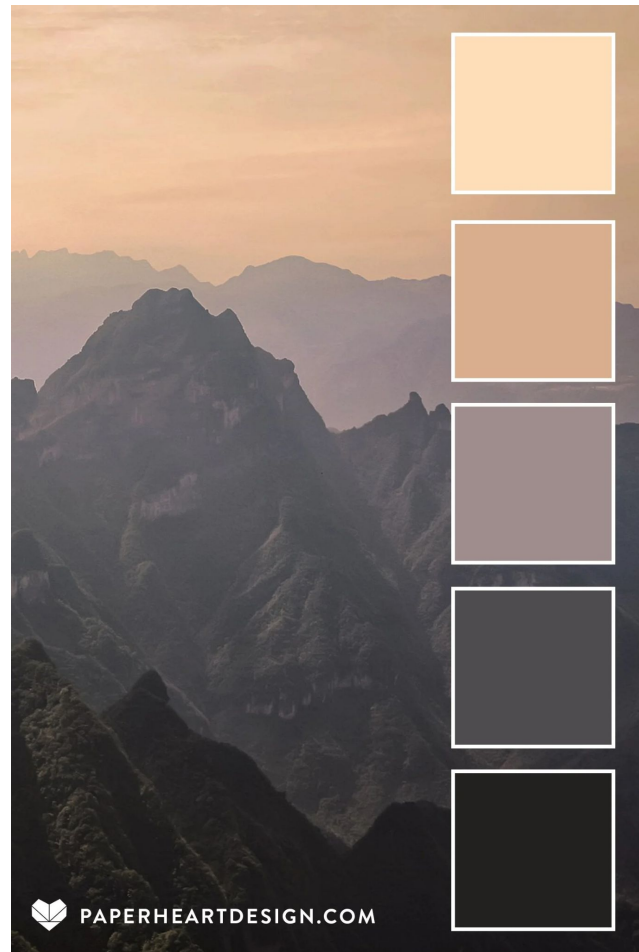

UI is simple to cater to elderly users, background is calming, interesting

# Idea Board

# Colors

Peaceful, serene,  
restorative, calming,  
health-focused

# Premium Feel

Clean, minimalist design. Designs are clean rather than beginners trying too hard, but professionals with purpose. No AI Slop.

Menus are white with black font, with glowing just like the apple vision pro vr style ui.

Some apps to reference: Oura, Calm, and other clean meditation, fitness apps

# Background

A 3d background of nature. Trees, water, dirt, grass, blue skies, the sun, clouds. Nothing that would interfere with the user itself; its simply a non-distractive background. If the user moves, the background should move 3d with it, like you're actually in the space.

# Simple UI

Buttons are large, and intuitive. No extra buttons that aren't explicitly useful all the time should be in the center. Only the most useful ones should be in the center. Others are on the side. Simple instructions are made before each game, and an intro/practice round is always an option when starting the game.

# Music

Using suno, make relaxing music, like lofi beats to calm the user down. It should be able to repeat infinitely, but not repetitive. Have interesting and altering melodies and backgrounds, but all calm and not distracting. Same idea; premium feel. Sound effects are professionally made using suno possibly also.
