

Games Ideas

Stick Drop

General:

1. A set of objects are hanging in the user's POV.
2. A random object falls, and the user must quickly grab the object before it hits the ground

What this tests:

- Visual to Action Reaction Time
- Useful Field of Vision

Background: Nature, trees, nothing distracting. Leaves are falling, you have to catch them in time. They fall with different speeds to test all populations. Faster and faster over time.

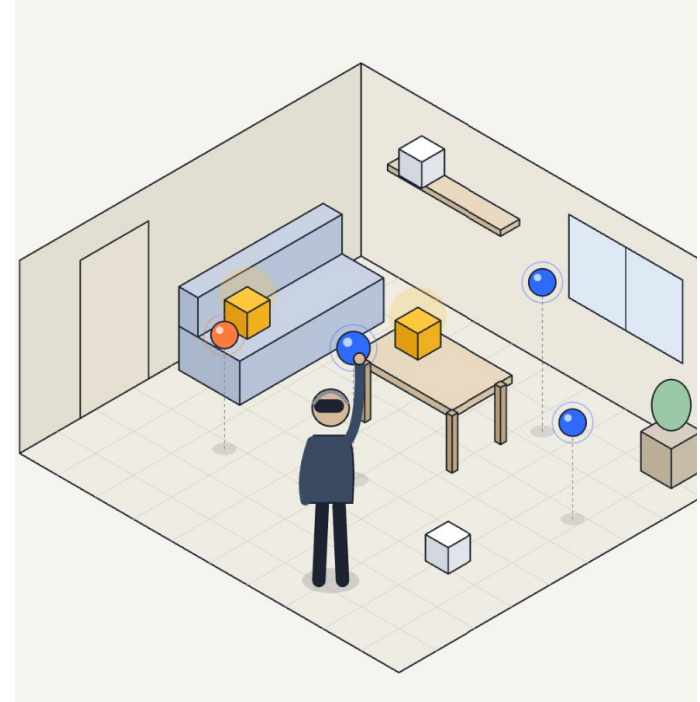

Spatial Memory

General:

1. A set of items spatially surround the user.
2. Instructions tell the user to select only certain items (color, texture, size, etc)
3. Then, the user must select either all balls they DID or DIDN'T previously select
(all items can just be colored balls for simplicity)

What this tests:

- Decision Making Time
- Spatial Memory

Scary Balance

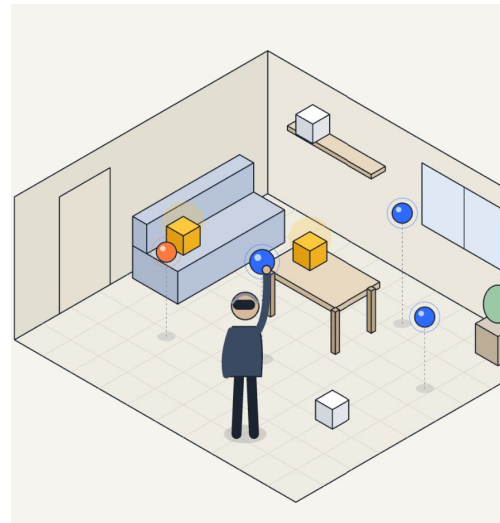

General:

1. A set of items are spatially spread across the room.
2. Instructions tell the user to go over there to pick up the item.
3. At random or preselected points, a 'monster' comes by, and the user must stay in that position until the monster passes.

(the game doesn't have to be scary, this is just an idea I had for clarity)

What this tests:

- Reach / Leaning Abilities
 - How far can they reach to pick up an item
- Holding positions + Shaking

Hole in the Wall

General:

1. The user is placed on a platform surrounding by a moat
2. A wall comes at them with a cut-out, making the user have to hold that position

What this tests:

- Mobility
 - How far can they move their arms to fit the position?
 - Are they consistently unable to hit a certain pose because of lack of mobility

Spatial Tracking

General:

1. The user exists. Sound and/or light indicates something is coming.
2. The user must spot and do an action at the incoming object (punch, point, etc) to make it disappear.

What this tests:

- Audio / Visual to Action Reaction Time
 - Can they locate specific sounds / actions
 - How fast can they do the action after locating the incoming object?

3d Nature background. Branches or leaves are falling, with audio cues.
